Application/Control Number: 10/077,780 Page 2

Art Unit: 3629

1. Applicant should note the changes to patent practice and procedure:

- A) effective December 01, 1997 as published in the <u>Federal Register</u>, Vol 62, No. 197, Friday October 10, 1997;
- B) effective November 07, 2000 as published in the <u>Federal Register</u>, Vol 65, No. 54603, September 08, 2000; and
- C) Amendment in revised format, Vol. 1267 of the Official Gazette published February 25, 2003.
- 2. The substitute specification filed January 16, 2004 is acceptable and has bee entered as the official specification.
- 3. The disclosure is objected to because of the following informalities:
  - A) applicant must update:
  - (1) the application data on page 1 in the paragraph "This application for letters ... Office on December 06, 2001.";

with the current status of each of the referenced applications, e.g., --now abandoned--, or --now patent #?--, or --which is abandoned and now serial number #?--, etc.

Appropriate correction is required.

- 4. The specification and drawings have not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification or drawings. Applicant should note the requirements of 37 CFR § 1.74, § 1.75, § 1.84(0,p(5)), § 1.121(a)-1.121(f) & § 1.121(h)-1.121(i).
- 5. 35 U.S.C. § 101 reads as follows:

"Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title".

- 5.1 Claims 21-30, 41 & 42 are rejected under 35 U.S.C. § 101 because the invention as claimed is directed to non-statutory subject matter.
- 5.1.1 The instant claims recite a system/device, (claims 21-30, 41 & 42), which has a disclosed practical application in the technological arts, and which does not merely define

Application/Control Number: 10/077,780

Art Unit: 3629

either a computer program, a data structure, non-functional descriptive material, (i.e. mere data) or a natural phenomenon. Hence, the instant claims merely define device that contains a data structure comprising series of steps that as claimed could be but are not necessarily to be performed on a computer.

- 5.1.2 It is further noted that applicant has not recited a specific machine since the operations recited in the claim are merely to illustrate the operations of the instant invention since these operations are not in fact implemented by a processor/computer. Hence, applicant envisions the invention as recited in claims 21-30, 41 & 42 as a disembodied storage device, i.e. memory, that stores a computer program as an abstract non-functional data structure. Such a disembodied storage device is not a specific machine because:
  - A) it is not associated with a computer in such a way as to cause the computer to operate in a specific manner, (note <u>In re Beauregard</u> 35 USPQ2d 1383 (CAFC 1995) and the associated claims of U.S. Patent 5,710,578); and
  - B) a memory device alone can not perform the functions recited within the claims.

Therefore, the recited disembodied storage device, which itself can not perform the functions recited within the claims as the invention, is inoperative and lacks utility for the purpose of the invention.

- 5.1.3 In view of the above, the invention recited in claims 21-30, 41 & 42, merely describes an abstract idea of a disembodied storage device, i.e. memory, that stores a computer program as an abstract non-functional data structure, since a disembodied storage device by itself can not produce a concrete and tangible result by performing the functions recited within the claims as the invention (State Street Bank & Trust Co. v. Signature Financial Group Inc. 47 USPQ2d 1596 (CAFC 1998)). Hence, claims 21-30, 41 & 42 do not have a claimed practical application, since the disembodied storage device is inoperative and therefore lacks utility for the purpose of the invention.
- 5.1.4 Nonfunctional descriptive material cannot render nonobvious an invention that would have otherwise been obvious. Cf. In re Gulack, 703 F.2d 1381, 1385, 217 USPQ 401, 404 (Fed. Cir. 1983) (when descriptive material is not functionally related to the substrate, the

Application/Control Number: 10/077,780

Art Unit: 3629

descriptive material will not distinguish the invention from the prior art in terms of patentability). Common situations involving nonfunctional descriptive material are:

- a computer that differs from the prior art solely with respect to nonfunctional descriptive material that cannot alter how the machine functions (i.e., the descriptive material does not reconfigure the computer), or
- a process that differs from the prior art only with respect to nonfunctional descriptive material that cannot alter how the process steps are to be performed to achieve the utility of the invention.
- 5.1.5 Hence, claims 21-30, 41 & 42 are directed to non-statutory subject matter.
- 6. The following is an Examiner's Statement of Reasons for Allowance over the prior art:
  - A) the prior art, for example, either Cramer et al (5,606,497) or Isono (6,011,841) or Arai (2002/0002470) or Kondo (2002/0062289) or Lee (6,424,704) or Takatori et al (2002/0077981) teaches a system in which a billable service is provided to subscribing customers. To this end, when a customer requests the service, the time of the request is logged in a database as the start time, and when the customer ends the service, an end time is logged in the database. After the service has been ended/terminated the logged start and end times for each request are used to determine the total billable charges to the customer associated with each of the customer's requests and uses of the billable service.
  - B) however, in regard to claims 1, 11, 21, 31 & 41, the prior art does not teach or suggest a billing system in which an user, using a multicast protocol, sends a message that includes the start time and the end/termination time for connecting the user to the multicast session in order to receive data during a multicast session, and in which the cost of receiving the multicast data is determined after the specified end/termination of the connection. Claims 2-10, 12-20, 22-30, 32-40 & 42 are allowable for the same reason.
- 7. Response to applicant's arguments.
- 7.1 All rejections and objections of the previous Office action not repeated or modified and repeated here in have been over come by applicant's last response.

Application/Control Number: 10/077,780

Art Unit: 3629

Page 5

- 7.2 As per the 35 U.S.C. § 101 rejection, since the recited program product as recited in the rejected claims does not affect the operation of anything, the program product is clearly an abstract non-function data structure. Hence, applicant's arguments are non persuasive.
- 8. The shorten statutory period of response is set to expire 3 (three) months from the mailing date of this Office action.
- 9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edward Cosimano whose telephone number is (703) 305-9783. The examiner can normally be reached Monday through Thursday from 7:30am to 6:00pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Weiss, can be reached on (703)-308-2702. Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-1113.
- 9.1 The fax phone number for **UNOFFICIAL/DRAFT FAXES** is (703) 746-7240.
- 9.2 The fax phone number for **OFFICIAL FAXES** is (703) 872-9306.
- 9.3 The fax phone number for <u>AFTER FINAL FAXES</u> is (703) 872-9306.
